

AI

Artificial Intelligence

David: Hi, everyone.

Leslie: Hi everyone. How are you?

David: How are you? Nice to see you back? It's been a while.

Leslie: It has been a while, and it's really good to see that.

David: Artificial intelligence becoming conscious and what it means for the liberation of humanity. Could AI be a vessel for something sinister like the Archons? Well, you know, you want to take some of this?

Leslie: Yeah, of course. I am of the opinion that, while the... I don't think it's the Archons who are in charge of AI.

David: No.

Leslie: The Archons are more like... they're more like managers. They're middle management.

David: The problem is this. Look, spiritual practitioners in primitive cultures have been using entheogens for many, many hundreds of years and thousands of years since the dawn of time, in a way to help in advance their tribe or their local group. But these were people that had tradition to stand on.

Leslie: Yes.

David: People who received spiritual training. These were not just people who were idly curious going to some DMT session with somebody that they met at a party.

Leslie: Recreational drugs are rather uncommon in hunter-gatherer societies, and are limited to things like fermented fruits and grains, usually. So, this is the problem. The problem is that there are people who made contact with lower dimensional entities that they are lower dimensional entities, I would call them demonic entities, however, that have access to superior technology. Technology is not superior to spiritual development.

David: No.

Leslie: The ability to bilocate, the ability to astral project, lucid dreaming, all these...

David: Multidimensional consciousness.

Leslie: All these things are being merely mimicked by technology. Remember, technology is a mimic. It replicates things. It is not the original thing. Just like a piece of petrified wood maintains the cellular structure and shape and looks very convincingly like wood, a silicone piece of wood is nothing at all the same thing as a carbon piece of wood. It is a copy. It is a silicone copy that is dead, without soul, without life. And this is what I see over and over when it comes to technology and AI. It has no soul. It has no life. There is no bio in it. And it's the lack of that, that bio, that makes it, seem to me, to be hostile. Now, this could simply be the prejudice of a carbon-based life form against a silicon-based life.

David: I don't think so, I don't think so.

Leslie: I don't think so either.

David: Not what I've heard. I mean, there are... we've heard... I've heard fantastic stories. I'm not a scientist, but apparently there are groups, I suspect their intelligence agency is involved, for sure big tech is involved, and they have been doing scientific studies of deep methods to get into longer periods of contacts with these lower dimensional high-tech entities. And a lot of the tech that has been fed into our culture exponentially, in a way that's exponentially increasing, is being fed into our culture extra-dimensionally by these demonic creatures involved with artificial intelligence.

Leslie: Yes.

David: So, I'm of the opinion that artificial intelligence is a huge danger for humanity, may even destroy humanity, may even be attempting to eliminate humanity already, judging by the geoengineering, the complete irrationality of the geoengineering that's going on, and a few other things. But what I hear is that they've been got scientific experiments going on with people with IVDMT drips.

Leslie: So that they stay down longer. Because DMT is such a short acting hallucinogen, that basically, by the time you get to where you're going, the trip is over. So, you have to, you know, drop in with your eyes open and be 100% attentive, which is incredibly difficult.

David: Right.

Leslie: So, by setting someone up on an IV drip, that gives you time to land, get your bearings, focus on what it is you really want to see and move forward. And this is the danger because with higher dimensional beings, there's a safety net. They're higher dimensional beings. They are lifting you up. And being more intelligent and more developed than you, they know how to gentle you into things and they're going to be easy with you. You see, these lower dimensional creatures resent us because we are more developed than they. And so, they like to hurt us a little bit with all this tech. Have you noticed?

David: So, the tech invasion or the... I think it's an invasion, it's not just that they're giving us tech, they're feeding as tech. It's always a 2-edged sword. And...

Leslie: And sharper on one side than the other, I've noticed.

David: Right, exactly. And look, for example, let me show you another thing. Look for example, recent interviews with Mark Zuckerberg, recent interviews with Tim Cook, take a look at their pupils.

Leslie: Get really close to the camera.

David: And look and look and see what's going on.

Leslie: Look at the pupils. Can you even tell what color?

David: These guys look like they're blasted on hallucinogens. Their pupils are that wide under bright lights.

Leslie: You can even see what color Mark Zuckerberg's eyes are because his pupils are dilated out as far as his iris is.

David: So, you know, I think there's a lot more going on with I would even say criminal use of hallucinogens these days. Because there are people that are using hallucinogens in an extremely irresponsible way to come in contact with very hostile, extra dimension... extra dimensional entities; extra dimensional entities that are giving them things, but who are hostile to humanity.

Leslie: And make no mistake, the choice of Apple, to use Apple as the logo, not just any Apple, an apple with a bite out of it.

David: Right.

Leslie: Think back to your mythology Westerners.

David: Right.

Leslie: What does that remind you of? And it was absolutely 100% a conscious decision on their part to do it that way. It was spoken about.

David: Right. So, yeah, AI is...

Leslie: A danger.

David: A danger, I believe. It may not be. God, I hope not. But AI...

Leslie: If we could put it on a short enough leash...

David: AI is a danger, big tech has become a danger as well. My goodness, we're in such danger coming from the technological sector right now, especially with the censorship coming from big tech. And we don't know how much longer we're going to be able to be here broadcasting to y'all on Facebook. I mean, today it's... it's political oppression, tomorrow, it could be religious oppression. Here on Facebook, here on YouTube, here on Twitter. I mean, right now, we're broadcasting for all it's worth on all of these social media networks, trying to get the word about magic, and the reality of magic, and that this is what is real, not the false reality that you've been spoon fed by television, trying to get this message out. But for how long? Who knows? I mean, fascism is rearing its head.

Leslie: Quickly, very quickly.

David: Free speech is not what it was last year already.

Leslie: And this is the real deal. Trust me when I say, it is much easier to hold on to something than it is to try and get it back...

David: Get it back.

Leslie: ... when you've lost it. You know this. You know it's true.
