

The Art & Science of Scalable CGI Products

DreamView was founded by veteran CGI visionaries with 100+ years experience in creating visual effects for blockbuster movies, AAA games, commercials, and eCommerce products.

Our process eliminates expensive traditional photo shoots by using photorealistic 3D CGI representations of products and art-directed virtual lifestyle environments to showcase them in.

Along the way, we've:

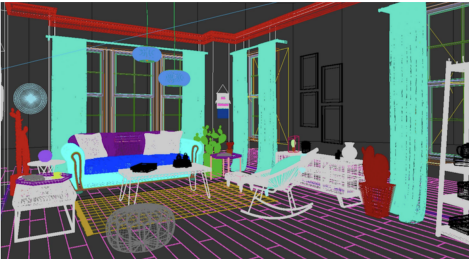

- Built world-class content teams
- Designed and developed many best-in-class applications.
- Consulted on workflow solutions involving millions of assets
- Architected scalable CGI pipelines
- Supported bulletproof back-end services
- VFX BLA BLA BLA

In 2018, we realized the advantages of bundling all of these incredible insights under one roof to bring results-driven solutions to eCommerce retailers.

Our clients can scale from hundreds to thousands of digital models and images monthly while reducing overhead.

Photoreal 3D Modeling

Our virtual technology enables clients to create Photo-real CGI, XR assets, and digital media at scale. Manage creative development, revisions and file formats effortlessly. Distribute those assets globally to any sales, marketing, or advertising channel.

Using our machine learning custom import engine, we can ingest Excel, Google Docs, JSON, really any data source into automated product data. There is no need for manual entry.

Our Virtual Photoshoots™ technology layer-scans every product for color variations and complexity. Once scanned, these become infinitely reusable assets to use for scale.

Each of our models are future-proofed with custom export and compatibility data that can be exported out to any format and pushed to Mobile, Web, PC/MAC

WE CREATE

LIFESTYLE SCENES AND IMAGERY • HIGH-RES MODELS • SILOS
PRODUCT CONFIGURATORS • 360 SPIN • 3D SPIN • AR/VR MODELS
ANIMATION • VIDEO • VIRTUAL SHOWROOMS
